

## The flexible FELASTEC® -Pads for your chain vehicle

is a pure synthetic sheet with glass-fibre reinforcement which can withstand dynamic loads. The steel plate is omitted in this case in order to reduce the weight of your chassis as much as possible (up to 60 %). The associated reduction in ground bearing pressure allows your plant to be deployed on very marshy ground. The stability of the plate is not affected by wear

Further advantages are:

- No damages and "ribbing stripes" on fastened surfaces
- reduction of the damages to farmland
- no vibration - and noiseless driving
- fully flexible pad allows optimum reduction in ground bearing pressure
- all pads are made to order, tailor-made for your plant

*Please call us for more informations of the applications  
of flexible FELASTEC® - pads for your vehicle with  
chain drive!*
